AUSRX LIGHT PAPER

The Gold-Backed Digital Asset Platform with Real Yield

1 AUSRX = 1 Gram Gold	HSBC Custody	5% Target APY
No Pre-Mine	Certificate-Triggered	\$550B Trade Corridor

Version: 1.0 (Draft)

Date: February 2026

Classification: CONFIDENTIAL

The Opportunity

The gold-backed token market has grown to **\$6 billion** in 2026—quadrupling in two years. Yet every major player shares the same fundamental flaw: **tokens minted from pooled reserves with no direct link to specific gold bars**.

AUSRX is different. Every token is minted only when HSBC issues a custody certificate containing specific bar serial numbers. This isn't an incremental improvement—it's a fundamentally different architecture.

The Problem with Current Solutions

Problem	Impact
Pooled Reserves	No way to verify which gold backs your tokens
Custody Opacity	Crypto company vaults, not regulated banks
Quarterly Attestations	Months between verification
Zero Yield	Dead capital with opportunity cost
Fragmented Ecosystem	Token only—no native marketplace or wallet

The result: Investors must trust issuers rather than verify backing themselves.

The AUSRX Solution

Certificate-Triggered Minting

Your Deposit → HSBC Trust Account → Gold Purchased at Spot →
HSBC Issues Certificate → Token Minted → You Receive AUSRX

What makes this different:

- Your deposit triggers a **real gold purchase** at that moment's spot price
- HSBC issues a certificate with **specific bar serial numbers**
- Tokens mint **only upon certificate receipt**—no certificate, no tokens
- Every token traceable to **specific gold bars you can verify**

HSBC Custody

AUSRX	Competitors
Tier-1 G-SIB Bank (HSBC)	Crypto company vaults

\$3T+ assets under custody	Variable capital reserves
Full banking regulation	Limited oversight
Real-time certificate lookup	Quarterly attestations
Hong Kong + Singapore vaults	Single jurisdiction

5% Staking Yield

AUSRX solves the yield problem through **Smart Letters of Credit**.

When corporations execute large commodity trades, they need Letters of Credit (LCs) as payment guarantees. AUSRX token holders can stake their holdings to serve as collateral for these Smart LCs. When trades complete, **LC fees (1-2%) are distributed to stakers**.

Target yield: 5% APY from real trade finance activity—not token inflation.

Our Mexico office provides direct access to the **\$550 billion China-Latin America trade corridor**.

Closed-Loop Ecosystem

Unlike competitors who create a token and hope others build around it, AUSRX delivers a complete platform:

Component	Function
AUSRX Token	1 token = 1 gram physical gold
Marketplace	Native B2B trading platform
Wallet	Send, receive, stake, verify certificates
Explorer	Real-time reserve verification
Smart LC Engine	Trade finance yield generation

The Apple approach: Everything works together seamlessly because we control the entire stack.

Token Specifications

Attribute	Value
Symbol	AUSRX
Backing	1 token = 1 gram physical gold
Custodian	HSBC (Hong Kong primary, Singapore secondary)
Pre-mine	None

Team Allocation	None (equity alignment instead)
Staking Yield	Target 5% APY (variable)

No Pre-Mine. No Team Tokens.

Every AUSRX token represents real gold deposited by real users. The founding team is compensated through **equity ownership**, not token allocation. We succeed when the platform succeeds—not by extracting value from token holders.

Fee Structure

10% below market rates across the board:

Action	AUSRX Fee	Competitor
Minting	0.027%	0.03%
Transfer	0.018%	0.02%
Marketplace	0.225%	0.25%
Redemption (Fiat)	0.18%	0.20%

Plus: No minimum purchase requirement (competitors require 1oz minimum).

Market Opportunity

Three Converging Markets

Market	Size	AUSRX Position
Gold-Backed Tokens	\$6B → \$20B+ (2030)	Institutional-grade alternative
Tokenized RWAs	\$24B → \$30T (2034)	Commodity segment leader
Trade Finance	\$55B market	Smart LC integration

China-Latin America Corridor

\$550 billion in annual trade—one of the world's fastest-growing corridors.

Country	Trade with China	Growth
Mexico	\$139.7B	+8.2% YoY
Brazil	\$180B+	Largest in region

Chile	\$55B	Copper-driven
-------	-------	---------------

Our Mexico office provides **direct access** to this trade flow for Smart LC facilitation.

Roadmap

Phase	Timeline	Milestones
Soft Launch	Q4 2026	Blockchain v1, Wallet v1, First gold deposits
Full Launch	Q1 2027	Marketplace, Regulatory compliance (HK/SG)
Platform Upgrades	Q3 2027	Blockchain v2, Mobile apps, Silver token
Vertical Integration	2028	Mining license activation, Multi-metal expansion

Mining License Strategy

AUSRX has secured the ability to own mining licenses—providing direct gold sourcing from mining operations. This creates a competitive moat no other gold-backed token issuer has.

Why AUSRX Wins

Capability	PAXG/XAUT	NASDAQ/NYSE	AUSRX
Gold-Backed Token	Yes	No	Yes
G-SIB Bank Custody	No	N/A	Yes
Certificate-Triggered Minting	No	N/A	Yes
Native Marketplace	No	Yes	Yes
Staking Yield	No	No	Yes
Trade Finance Integration	No	No	Yes
Mining License Ownership	No	No	Yes

Security & Compliance

Experience-Driven Security

Our team has designed, deployed, and stress-tested financial systems at scale. We conduct **third-party security audits before production**—not after incidents.

""The infrastructure is assessed as robust for Phase 1 deployment." — Independent Security Auditor, February 2026"

Six Security Layers

1. Network Security (DDoS, WAF, Rate Limiting)
2. Authentication (2FA, Hardware Keys)
3. Authorization (Granular RBAC)
4. Data Protection (AES-256-GCM, TLS 1.3)
5. Audit Integrity (Tamper-Evident Logging)
6. Application Security (ORM, Parameterized Queries)

Regulatory Strategy

- **Hong Kong:** VASP License (SFC)
- **Singapore:** MPI License (MAS)
- **Full KYC/AML** with tiered verification
- Segregated trust accounts for user protection

The Bottom Line

AUSRX is the only gold-backed token that combines:

- ✓ Institutional-grade custody (HSBC)
- ✓ Certificate-triggered minting with real-time verification
- ✓ Native marketplace with built-in liquidity
- ✓ 5% staking yield from actual trade finance
- ✓ Direct access to \$550B trade corridor
- ✓ Mining license ownership for vertical integration
- ✓ No pre-mine, no team tokens—pure equity alignment

We're not creating a coin hoping someone builds around it.

We're building the complete solution.
